TERMUX COMPLETE PRACTICAL COURSE

This document is a complete, step-by-step Termux course designed for beginners who want real skills. Termux is a Linux command-line environment, not a 3D animation or game engine.

MODULE 1: TERMUX & LINUX FUNDAMENTALS

1. Updating and managing packages using pkg and apt
2. Understanding Linux file system structure
3. Core commands: ls, cd, pwd, cp, mv, rm
4. File permissions and chmod
5. Editors: nano basics

MODULE 2: BASH SCRIPTING

1. What shell scripts are and why they matter
2. Shebang (#!/bin/bash) explained
3. Variables, loops, and conditions
4. Automation: file creation and renaming scripts

MODULE 3: C PROGRAMMING IN TERMUX

1. Installing and using clang/gcc
2. C program structure and compilation process
3. Loops, functions, arrays, pointers
4. File input/output operations
5. Projects: calculator and file copy tool

MODULE 4: PYTHON PROGRAMMING

1. Python basics and scripting
2. Using pip and modules
3. Automation scripts
4. Terminal ASCII animations using time and ANSI colors
5. Basic logic-based games

MODULE 5: GRAPHICS & REAL LIMITATIONS

1. 2D graphics using pygame
2. Game loop, keyboard input, and simple physics
3. Why cinematic 3D is not realistic in Termux

FINAL NOTE: Master these fundamentals first. Once you understand Linux and programming, you can confidently move to PC tools like Blender, Unity, or Unreal Engine for real 3D work.
